## EDUCATION BACKGROUND

---

### University of Wisconsin, Madison

*Major in Computer Science, Mathematics*

GPA: 3.921/4.00.

Research Interests: System for ML/big data, distributed systems, database.

**Madison, United States**

*Sept. 2019 - Est. Dec. 2021*

### University of Electronic Science and Technology of China

*Major in Computer Science and Technology (Honors)*

GPA: 3.92/4.0. Top 5%.

**Chengdu, China**

*Sept. 2017 - June 2019*

### Israel Institute of Technology

*Summer Session Visiting Student (Full Scholarship)*

**Haifa, Israel**

*July 2018 - Aug. 2018*

## Competitions

---

### ACM-ICPC International Collegiate Programming Contest

*Nov. 2019*

- Gold Prize (ranked 3/180, 1.6%) in ICPC North America regional contest. Coach: Prof. Dieter van Melkebeek.

### Huawei Code Craft Challenge

*Mar. 2018 - Apr. 2018*

- Designed algorithms to predict future demand for cloud services and allocate virtual machines optimally.
- Silver Prize (top 15 in 1515 teams, 1.3%). Won the green card of Huawei Research Intern.

## EXPERIENCE

---

### Independent Research Under Prof. Shi Gu

**Chengdu, China**

*Research Assistant*

*May. 2018 - Sept. 2018*

- Exploring Adversarial Neural Networks and neural style transfer to derive the ground truth image from two copies of the same image perturbed by two different kinds of noise.
- Working on image content preservation when a blurred and a noisy image of the same scene is provided using neural style transfer and generative adversarial networks (GANs).
- Use cases include increased precision in MRI scans and Autonomous Car Vision in bad weather condition.

## Projects

---

### Hybrid Concurrency Control Based on Workload Forecasting

*Feb. 2020 - Apr. 2020*

- Course project at CS 839 (Design the Next-Generation Database). Designed adaptive concurrency control protocols based on system monitoring and workload forecasting and dynamically adopt different concurrency control protocols according to some key factors (contention, abort rate, etc.).

### Precision Agriculture Based on Unmanned Aerial Vehicles

*July 2018 - Oct. 2018*

- We used comprehensive methods like Mobile SSD, NVDI to predict crop yield and monitor the health status of crops. The project is based on a DJI Inspire UAV and PaddlePaddle deep learning framework.
- National Second Prize (top 10 in 1049 teams, 1%) in the China Artificial Intelligence Innovation Contest. Won the qualification of Baidu Intern and 10,000 RMB bonus.

### Sentiment-controllable Stylic Music Generation

*Dec. 2017 - Mar. 2018*

- Transformed the reinforcement learning model Sequence GAN to the field of music generation.
- Selected as one of the best projects (top 10 in 583 projects, 1.7%) in Microsoft Student Club Practice Studio Program.

## Extracurricular Activity

---

### Microsoft Student Club @ UESTC

*Vice-Chairman, Leader of Tech Department*

*June 2018 - June 2019*

- Organized coding training for freshmen and hosted weekly tech talks.
- Won the certificate of “Star of the Club” from Microsoft Research Asia.

## SKILLS

---

- Programming languages: experienced in C++/Python, familiar with Java/Rust/Haskell/JS/L<sup>A</sup>T<sub>E</sub>X/Matlab
- Selected courses: data structures, algorithms, AI, ML, computation theory; database, network, programming languages, parallel computing, design next-gen database.
- In-progress courses: stochastic process, combinatorial optimization, linear programming
